ASSOCIATION OF REALTORS®  
*The Voice of Real Estate® in the Denver Metro Area*

# Denver Metro Real Estate Market Trends Report

August 2022

# MARKET OVERVIEW

The August report, according to recent data provided by the Denver Metro Association of Realtors® Market Trends Committee, showcases the July market transactions encompassing the 11 counties of the Denver Metro Area (Adams, Arapahoe, Boulder, Broomfield, Clear Creek, Denver, Douglas, Elbert, Gilpin, Jefferson and Park).

Here are the highlights:

## Residential (Detached plus Attached)

		Prior Month	Year-Over-Year
Active Listings at Month End	7,361	21.53%	81.48%
Closed Homes	4,279	-21.23%	-31.61%
Close Price - Average	\$690,935	-3.33%	11.04%
Close Price - Median	\$595,000	-2.46%	10.80%
Days in MLS - Average	13	30.00%	44.44%

## Detached

Active Listings at Month End	5,650	20.62%	96.32%
Closed Homes	3,010	-20.77%	-31.87%
Close Price - Average	\$781,631	-3.14%	12.02%
Close Price - Median	\$650,000	-2.99%	8.47%
Days in MLS - Average	13	18.18%	62.50%

## Attached

Active Listings at Month End	1,711	24.62%	45.25%
Closed Homes	1,269	-22.29%	-31.00%
Close Price - Average	\$475,811	-4.87%	7.92%
Close Price - Median	\$408,000	-5.12%	7.37%
Days in MLS - Average	13	44.44%	8.33%

# MARKET INSIGHTS

## ✓ Realtor® Tidbits:

- Showings are much easier to navigate in this “new” market; there aren’t the tight time slots there used to be on most listings and you can schedule—and most likely *reschedule*—if needed. Buyers think there are deep discounts with all the doom and gloom headlines, but sellers are not yet ready to discount significantly. Sellers might help paying down the rate or some closing costs, but deep discounts are not in the cards right now.
- With the market shift, buyers have the opportunity to be more thoughtful about their home search and their choices in writing offers.
- Denver is still undoubtedly a strong seller’s market, but it’s feeling more hopeful for buyers than just one to two quarters ago.
- Many sellers are starting to offer buyer incentives (such as rate buy downs and HOA fee prepayments) after seven to 14 days in the MLS instead of price reductions. Since buyers aren’t “searching” for that criteria, the effectiveness of this strategy is unknown.

## ✓ Local News:

- Denver ranked fifteen out of the top 20 metro areas with the most single-family building permits issued at 13.2 per 10,000 people in the first quarter of 2022.
- Colorado gained an additional 2,469 real estate agents last year, the biggest jump in a decade.
- 5280 magazine’s ranking of the best neighborhoods evaluated all 78 Denver communities taking into account home values, school quality, safety and distinctive aspects that set a place apart (cultural offerings, nearby shops, bike-ability, open spaces, etc.). The top five neighborhoods were Wellshire, Belcaro, Washington Park, Platt Park and City Park.
- Denver’s housing vacancy rate is among the nation’s lowest. While there are signs the market is cooling, housing inventory is still low in the Denver area.
- Of the 51 cities analyzed by real estate data company Anytime Estimate, Denver had the third lowest homeowner vacancy rate, coming in at 0.70 percent, well below the 1.40 percent national average. Denver’s rental vacancy rate was also below the national average of 5.8 percent, coming in at 4.50 percent, the twelfth lowest of all cities surveyed.
- Homelessness is getting worse in metro Denver. At least 784 more people lack permanent housing than during the last survey, up 13 percent, with the highest increases in the suburbs. It’s estimated that over 9,000 people are experiencing homelessness state-wide.
- Homeowners in Denver typically pay a mortgage of \$2,944 per month (not including taxes or insurance), which is up 79.3 percent from June 2019. Zillow reports that Denver rent now averages \$2,005 per month, a 20.4 percent increase since June 2019.
- Starting July 1, 2022, all radon testing companies must have a radon measurement professional license in Colorado.

## ✓ National News:

- Nearly half of U.S. homeowners plan to upgrade or remodel their homes this year.

The trend is most prominent among homeowners between the ages of 25 to 44, who are undertaking the most renovations and looking to bring new trends and renovations to the aging homes they purchase.

- All data points to an economic recession and a housing slowdown but with only 1.72 months of inventory and the average American 30 years old, we expect more buyers will come out when rates dip not only holding home prices up but possibly pushing them even higher.
- Sixty-nine percent of millennials prefer owning over renting. To afford homeownership, millennials sacrifice weddings, vacations and even television.
- Lumber prices are down 40 percent from their high in May 2021.
- “Zoomtowns” are cooling. Some metro areas that attracted out-of-state buyers early in the housing boom are cooling off the fastest.
- Boise saw the biggest housing price cuts in June. The metro areas with the most price cuts in June after Boise were Denver, Salt Lake City and Tacoma.
- Chief Economist and Senior Vice President of Research at the National Association of Realtors® Lawrence Yun said he does not foresee a nationwide decline in home prices despite indications that price growth is set to slow. Yun also remarked that the potential for weaker sales should increase available inventory in some markets, but not enough to diminish persistent affordability constraints which, for many Americans, have kept homeownership out of reach over recent years.
- Nationally, last month, new home contract cancellations hit 14.5 percent, their highest level in years outside of April 2020’s COVID-19-tainted peak of 16.5 percent and are 30 percent above their seasonally adjusted pre-COVID-19 rate. Similarly, the percentage of pending-home sales that fell out of contract in June hit 14.9 percent, their highest level in years excluding the COVID-19-induced March 2020 peak of 17.6 percent and is 20 percent above the pre-COVID-19 rate of about 12.5 percent.

## ✓ Mortgage News:

- The Federal Reserve increased rates again by three-quarters of a percentage point; however, the move didn’t affect mortgage rates much as lenders have had the most recent hike “baked into” pricing.
- Mortgage demand hit the lowest point since 2000, according to the Mortgage Bankers Association.
- After several attempts to break below the low 2.7s in the past four months, the 10-year treasury yield finally made it into the 2.6s giving way to lower mortgage interest rates than we’ve seen since April when they were on their way up.

## ✓ Quick Stats:

- Average active listings for July are 15,971 (1985-2021.)
- Record-high July was 2006 with 31,989 listings and the record-low was set last year with 4,056 listings.
- The historical average increase in active listings from June to July is 4.35 percent. This year’s increase of 21.53 percent represents a healthy increase in housing inventory.

# EXPERT OPINION

**ANDREW ABRAMS**

Chair of the DMAR Market  
Trends Committee and  
Denver Realtor®

We are no longer in a *shifting* market. We have *shifted*, and the real estate market is more balanced. The headlines will be about prices decreasing, but that is relative to last month, not last year. Month-over-month, we are down 3.33 percent but compared to last year, we are still up 11.04 percent. The stock market and cryptocurrency have many potential buyers hesitant to enter the real estate market. A more balanced market - combined with slightly decreasing interest rates - may create opportunity for those who previously felt burned out on the process.

One of the primary indicators of a shifted market is the close-price-to-list-price ratio, which was down to 100.81 percent. We are seeing this every weekend as buyers have become more specific about what they are looking for and frequently question if, and how much, below the asking price they can offer. I expect the close-price-to-list-price ratio to decrease to under 100 percent as the months continue, which translates to more patience and realistic expectations needed by sellers. There are plenty of cases where a seller has a nice property, lists it reasonably and gets multiple offers. But, that is no longer the norm. You can't simply put a sign in the yard and expect it to sell. Multi-leveled marketing and strategy are as important as ever. A game plan for when a house doesn't sell after a certain number of weeks has become more common during the initial conversation with a seller.

Every indicator points to the market shifting closer to a buyer's market. The month-end active listings increased 21.53 percent last month, pending and closed deals decreased and days in the MLS increased by 30 percent. We are still a long way from what many experts would consider a buyer's market. We have over 2,000 fewer properties on the market today than we did three years ago and, during the last three years, the amount of standing inventory peaked in June and July. That was abnormal. Historically, the market doesn't peak until August or September. We are returning to a more normalized market.

The question that frequently gets asked is, "Are we in a bubble?" Prices are high, interest rates feel high (even though compared to historic norms are not), the economy has taken a dip and buyer sentiment is down. Even with all those uncertainties looming over potential buyers, a housing bubble should not be one of them. Housing prices are based on supply and demand. Our supply is relatively low. People who currently own are not incentivized to move as their interest rate is most likely lower in their current house than it would be in a future one. In other words, if someone were to sell and buy at the same price, their monthly payment would be higher in the new property than the current one. Any form of change naturally causes hesitation as buyers and sellers alike attempt to realign reality with expectations. This will continue throughout the year, which will impact our housing market. While prices may go down and days in the MLS may go up, we are still far away from a bubble.

# EXPERT OPINIONS

“

**Luxury Market (properties sold for \$1 million or more):** As July brings the heat, we take off to our cooler, wildflower-covered Colorado mountains to hike, camp, fish and raft. Or maybe we hop on a plane with the throngs of Americans headed to Europe this summer, happy to experience travel again post-pandemic with a strong U.S. dollar in our pocket. With many of us out-of-town, combined with mortgage rates that briefly went over six percent, the Luxury Market felt the seasonal cooling in July.

New luxury listings were down 22.13 percent, pending sales were down 18.16 percent and closed homes were down 30.80 percent since June. There were 718 new luxury listings in July and 492 closings. At the end of the month, there were 1,190 active homes for sale in the Denver Metro area over \$1M. The most expensive home sold in July was in Greenwood Village and sold for almost half a million dollars over list price at \$5,998,000. The most expensive luxury home still on the market in July was a 300+ acre ranch in Golden, listed for \$24,700,000.

Like our temperatures, luxury inventory is up. Compared to last year, inventory is up a whopping 39.05 percent, most in detached homes. Notably, the months of inventory increased in July to 2.37 months for detached luxury homes and 3.31 months for attached. This is a leading indicator that the Luxury Market, particularly attached luxury homes, is no longer an extreme seller's market as we have seen for the past two years. The Luxury Market saw the highest number of expired listings (183) of any sector in July. This trend toward a balanced market is reinforced by the close-price-to-list ratio for July, which was down 3.11 percent from the prior month to 100.44 percent. Could the crazed bidding wars be over?

Just as July gives us some breathing room to travel and enjoy our summer vacations, it brings buyers in the market some breathing room – longer showing windows, more time to consider making an offer, less competition and slowing prices. Sellers, meanwhile, need to appreciate this shift in the landscape and adjust their expectations. Many homes are not going under contract in the first week, there will be under ask price offers and contingencies won't be waived. Just like it used to be, pre-pandemic! All-in-all, a return to "normal" is on the horizon this year. — **Colleen Covell, DMAR Market Trends Committee member and Denver Realtor®**

**Signature Market (properties sold between \$750,000 and \$999,999):**

July, the second hottest month on record in Denver history, left the housing market in a bit of a chill. Whether it was the higher interest rates, a return to near pre-pandemic travel numbers, a return to market normalcy or simply the desire to stay in air conditioning, the numbers were down across the board compared to recent months.

This cooling was evident in the Signature Market, covering homes in the \$750,000 to \$999,999 price range and representing 15.49 percent of homes sold for the month. Sales volume was down almost a full quarter percent (24.53 percent) and down 6.29 percent over last July. While new listings were down 18.39 percent and closed listings were down 24.49 percent from last month, pending listings were down only 1.29 percent, holding almost flat.

With fewer showings and offers, days in MLS went up — more than half the homes in the Signature Market were on the market for at least one week while the average was 15 days (up from five and 12 days, respectively). Homes closed in July near list price (100.75 percent) as bidding wars cooled and fewer buyers felt the need to overbid for homes.

Yet, this "chilling" market is still a healthy, seller's market with over a month of available inventory. Year-to-date, the Signature Market sales volume is a full \$1 billion or 29.70 percent ahead of last year's pace. Most homeowners looking to sell can expect a good return, even if it's not at the astronomic levels we have seen in recent months. On the other side, an uptick in inventory and less competition is an opportunity for savvy buyers.

There is something for everyone in this market if we all stay chill. There are great homes available and great buyers ready to purchase. Knowledge, a good plan and a great team will help you to navigate this market successfully. — **Nick DiPasquale, DMAR Market Trends Committee member and Denver Realtor®**

# EXPERT OPINIONS

“

**Premier Market (properties sold between \$500,000 and \$749,999):** Scattered afternoon thunderstorms and hopeful showers are a predictable occurrence in the middle of summer in the Denver Metro area. However, this slight relief doesn't mean summer is over or that snow is knocking on our doors. It's just a nice, temporary relief from the heat. This activity parallels our real estate market. While some may speculate that the market has

gone cold, I think it's just the temporary relief we all need.

There is a lot of talk about rates, and while they are higher than they were a year ago, they are not the highest we have seen historically... not even close! The Premier Market is resilient and will ride out the traditionally slower season of our market. The months of inventory for both attached and detached homes is 1.75m which is no longer slanted to favor sellers and is an excellent direction to head toward a balanced market.

New listings in the Premier Market were down 19.86 percent from the previous month; similar to the year-over-year listing of 2,573 last July to 2,627 this July. Buyers out there shopping have relatively the same amount of inventory to look at, and the good news is that they have more room to breathe with the average days in MLS up 44.44 percent from nine to 13 days. They can go back for a second showing and even consider what they want in their newest home purchase. This is a good thing for everyone, as with more time to process and make a decision will come less buyer's remorse.

If your sellers are deciding now is their time to sell, they can take comfort in knowing that while they might not get multiple offers in one weekend, they are still getting a higher price per square foot than they would have a year ago. The price per square foot total has gone up 9.43 percent from \$265 to \$290 year-over-year. A return to the pre-pandemic housing market appears to be on the horizon, but the big picture is actually a healthier housing market for buyers and sellers alike. — **Jessica Reinhardt, DMAR Market Trends Committee member and Denver Realtor®**

**Classic Market (properties sold between \$300,000 and \$499,999):** With the peak of the summer heat now behind us and cooler fall weather on its way, the Classic Market has also cooled off from temperatures that dogged us earlier in the year. July saw a 37.50 percent increase in the average number of days in MLS over June and a 57.14 percent increase over July 2021. At the same time, close-price-to-list price ratios trended downward, hovering at 100 percent in both detached (100.88 percent) and attached (101.32 percent) segments.

Let this not be a signal of the market's fiery crash and burn - appreciation in this segment is strong and holding. A price of \$323 per square foot in July represents an 11.38 percent increase over July of last year. Year-to-date price per square feet numbers indicate the same - \$331 price per square foot year-to-date equates to 19.93 percent year-to-date appreciation.

In July, the Classic Market was the second largest slice of the total market (only behind the Premier Market) and was home to approximately a quarter of the market - 25.48 percent of new listings and 27.42 percent of pending listings were priced between \$300,000 and 499,999. And, unsurprisingly, at the price point accessible for the largest number of buyers, the Classic Market had the lowest months of inventory of 1.27 between both attached and detached properties.

What is true of the market overall in July is true of the Classic Market. July's Classic Market data indicates a reprieve from pandemic-era acceleration and perhaps even a return to balance. Though Denver's Classic Market remains undoubtedly strong on the sell-side, for buyers looking to make a market entry (first-time homebuyers especially) prospects of going under contract and making it to the closing table, certainly feel more hopeful. — **Molly Polinkovsky, DMAR Market Trends Committee member and Denver Realtor®**

# GLOSSARY

**Active Listings:** The number of properties available for sale at the end of the reported period. The availability of homes for sale has a big effect on supply-demand dynamics and home prices.

**New Listings:** The number of properties which became available during the reported period.

**Pending:** The number of listings that were changed status from Active to Pending at the end of the reported period. Pending listings are counted at the end of the reported period. Each listing can only be counted one time. If a listing goes to Pending, out of Pending, then back to Pending all in one reported period, the listing would only be counted once. This is the most real-time measure possible for home buyer activity, as it measures signed contracts on sales rather than the actual closed sale. As such, it is called a “leading indicator” of buyer demand.

**Days in MLS:** A measure of how long it takes a given property to sell.

**Closed Listings:** A measure of home sales that sold and closed during the reported period.

**Average Close Price:** A sum of all home sales prices divided by the total number of sales. Not considered the most accurate gauge since data from the high-end can easily skew the results.

**Median Close Price:** A measure of home values in a market area where 50 percent of activity was higher and 50 percent was lower than this price point. This method is preferred because it's more insulated from outlying activity occurring at either tail end of the market.

**Months Supply of Inventory (MOI):** A measure of how balanced the market is between buyers and sellers. It is expressed as the number of months it would hypothetically take to sell through all the available homes for sale currently, given current levels of home sales. A balanced market ranges from four to six months of supply. A buyer's market has a higher number, reflecting fewer buyers relative to homes for sale. A seller's market has a lower number, reflecting more buyers relative to homes for sale.

**Residential (RES):** Represents the overall housing market which includes activity of detached single-family homes as well as attached homes.

**Detached Homes:** Activity of Detached Single-Family Homes.

**Attached Homes:** Activity of Attached Condos & Townhomes.

**Classic Market:** Properties priced between \$300,000 and \$499,999.

**Premier Market:** Properties priced between \$500,000 and \$749,999.

**Signature Market:** Properties priced between \$750,000 and \$999,999.

**Luxury Market:** Properties priced at \$1,000,000+ (\$1M+).

**REcolorado:** The source of our MLS listings data.
